

Flexible Suction Bell with Tubing for NPWT

ITEM 3130

20 / cs

HCPC A6550

The Dürma+ Flexible Suction Bell with Tubing for NPWT is a sterile, single-use component designed to support consistent negative pressure wound therapy. Its flexible silicone bell conforms to body contours, while kink-resistant tubing helps maintain steady suction flow during movement or repositioning.

- Designed to support consistent negative pressure delivery with the Dürma+ NPWT platform
- Flexible silicone bell conforms to contours and hard-to-dress areas to help maintain a stable seal
- Designed to support continuous therapy for mobile patients
- Soft suction bell reduces the need for foam bridges
- Secure adhesive interface reduces the risk of air leaks and minimizes dressing adjustments
- Kink-resistant tubing helps maintain steady suction during movement
- Transparent bell body supports quick placement and visual confirmation of fluid flow
- Low-profile bell and flexible tubing designed to sit comfortably under drapes and clothing
- Sterile and individually packaged for single use to support infection control protocols
